HealthCue

Behavioral Pre-Activation for Cervical Screening

Executive Summary

HealthCue is an early-stage digital health startup developing a behavioral pre-activation platform for cervical cancer screening. We target women aged 20-23 before their first screening invitation, using gamified micro-learning, peer stories, and behavioral commitment tools delivered through university channels.

> **Mission:** Helping young women overcome fear, understand screening, and take action, closing Sweden's persistent participation gap in the under-30 cohort.

The Problem

Despite Sweden's world-class screening infrastructure (HPV self-sampling, SMS reminders, pre-booked appointments), participation among women under 30 is significantly lower than older age groups. The barrier is not access, it is behavioral: fear, lack of preparation, and low awareness mean that the first invitation letter triggers avoidance rather than action.

1 in 3 young Swedish women do not attend first screening

Age 23 first invitation - too late for behavioral priming

Our Solution

HealthCue activates women **2-3 years before** the first invitation through a mobile-first platform embedded into university life:

- **Awareness modules** (ages 21-22): Pap smear basics, myth-busting, HPV education - each under 5 minutes
- **Gamified micro-learning** (age-23): Badges, quizzes, peer stories building commitment
- **Booking integration**: Deep link to national portal removing friction at the critical moment
- **Reward mechanics**: Points and milestone rewards tied to first confirmed attendance

Market Opportunity

Target cohort (Sweden)	∼120,000 women aged 20-23
Annual entry cohort	∼30,000 new university students
Pilot addressable market	∼8,000 women (Gothenburg)
Expansion Total Addressable Market(TAM) (EU)	15M+ women aged 20-25

Revenue Model

HealthCue operates a **B2B2C model** - free for end users, funded by institutional partners:

- **University licensing** - Annual Software as a Service(SaaS) fee per institution (SEK 80-150K/yr)
- **Regional health authority contracts** - Outcome-based payments per verified first booking

Go-to-Market Strategy

Phase 1 **Pilot Validation** - Launch at Chalmers University. Validate ≥15% uplift in first-time booking through randomized controlled design.

Phase 2 **Multi-University Expansion** - Expand to 3-5 Swedish universities. Integrate with regional health authority workflows.

Phase 3 **Regional Integration** - Formalize partnerships with Västra Götaland screening unit. Demonstrate scalable institutional model.

Phase 4 **National & EU Scaling** - National deployment across Swedish university cities, followed by

exploration of EU white-label partnerships.

KEY RISKS & MITIGATION

Risk	Mitigation	Risk	Mitigation
Low user adoption	Embedded in orientation & portal integration	**University buy-in**	Pilot validation with measurable booking uplift
Data & GDPR	Privacy-by-design, no identifiable health data stored	**Engagement inequality**	AI monitoring of subgroup participation & adaptive content

Vision: The behavioral layer every national screening system is missing, starting in Sweden, scaling across Europe.
